Abstracts

Calcium sulfate whisker is a high-performance inorganic material characterized by its unique single-crystal, fibrous structure, typically manufactured through hydrothermal synthesis or other controlled crystallization processes from calcium sulfate dihydrate (gypsum). These whiskers exhibit exceptional mechanical properties, including high tensile strength, stiffness, and thermal stability, along with excellent dispersibility and compatibility with various matrices, making them valuable as reinforcing fillers in polymers, rubbers, coatings, and composites. Their needle-like morphology and uniform dimensions contribute to enhanced mechanical performance, dimensional stability, and wear resistance in end-products, while their inorganic nature provides flame retardancy and corrosion resistance. Applications range from automotive and construction materials to electronics and aerospace, where lightweight, high-strength, and multifunctional materials are demanded.

The global Calcium Sulfate Whisker market size was estimated at USD 120.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
