Abstracts

Call Center Speech Analytics Software is an intelligent operations management tool designed specifically for enterprise call centers (including inbound services and outbound marketing calls). It leverages core technologies such as Automatic Speech Recognition (ASR), Natural Language Processing (NLP), Machine Learning (ML), and sentiment analysis. At its core, it processes call audio (real-time calls or historical recordings) through a complete process of "speech-to-text conversion - semantic parsing - feature extraction - data insights." This automatically identifies key information such as customer intent, emotional inclination, compliance risks, and script quality, transforming unstructured voice data into structured operational metrics and decision-making support. This addresses the pain points of call centers, such as difficulty in quantifying service quality, capturing customer needs, managing compliance risks, and improving operational efficiency. It supports service optimization, sales empowerment, compliance risk control, and management decisions, ultimately achieving enhanced customer experience and optimized operating costs.
