Report Overview

A can seaming machine is a machine used to seal the lid to the can body. Two-piece cans have only one seam around the top end. Three-piece cans have plain ends that are seamed to the can body on both ends to close. The seam formed is generally leak proof and is made by mechanically overlapping the two layers to form a hook. During the can seaming process, the seamer chuck holds the can while the rolls rotate around it.
