## Abstracts

In 2024, global sales of CAN to Ethernet Gateways reached approximately 1.4 million units, with an average market price of about USD 481 per unit, an annual production capacity of roughly 1.9 million units, and an industry-average gross margin of approximately 24%. A CAN to Ethernet Gateway is an electronic device used in automotive, industrial, and automation systems to connect, translate, and manage communication between multiple CAN (Controller Area Network) buses or between CAN and other communication protocols such as LIN, FlexRay, or Ethernet. These gateways ensure reliable data exchange between different subsystems, isolate faults, filter messages, and can provide protocol conversion or data logging functions. They are critical in modern vehicles and industrial automation setups where multiple electronic control units (ECUs) or devices must communicate seamlessly and safely. Upstream components include microcontrollers, CAN transceivers, power management ICs, connectors, printed circuit boards (PCBs), and enclosure materials. Material costs account for approximately 50-60% of total production cost, with labor and assembly at 15-25%, and testing, certification, and quality assurance around 10-15%. Downstream, CAN Bus Gateways are deployed by automotive OEMs, commercial vehicle manufacturers, industrial automation integrators, and smart transportation solution providers. They are used in vehicle networks, factory automation lines, and robotic systems, where reliable message routing, isolation, and protocol translation are essential to operational efficiency and safety. The global CAN to Ethernet Gateways market is growing steadily, driven by the increasing complexity of automotive, industrial, and automation networks that require seamless communication between multiple ECUs and subsystems. Rising adoption of electric vehicles, advanced driver-assistance systems (ADAS), industrial automation, and smart transportation solutions has intensified demand for reliable, high-speed, and multi-protocol gateways. Technological trends such as CAN FD support, intelligent data filtering, cross-protocol conversion, and

ruggedized designs for harsh environments are expanding applications. The market is competitive, featuring established automotive suppliers, industrial electronics manufacturers, and niche players offering customizable and programmable gateway solutions for diverse sectors.

The global CAN to Ethernet Gateways market size was estimated at USD 673.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
