Report Overview

Cancer therapeutics and biotherapeutics refer to a range of treatments and therapies designed to target and eliminate cancer cells in the body. These products include chemotherapy, immunotherapy, targeted therapy, and biotherapeutic agents such as monoclonal antibodies and cancer vaccines. Cancer therapeutics aim to either directly kill cancer cells or boost the body's immune system to recognize and destroy cancer cells. Biotherapeutics, on the other hand, are biological products derived from living organisms that target specific molecules involved in cancer growth and progression. The market for cancer therapeutics and biotherapeutics is driven by the increasing prevalence of cancer worldwide, advancements in biotechnology and genomics leading to the development of targeted therapies, and growing investments in research and development by pharmaceutical companies.
