Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Candy DHA competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Candy DHA is the incorporation of docosahexaenoic acid (DHA), an essential omega-3 fatty acid, into candies such as gummies, chews, or chocolates to create a tasty and convenient way of delivering nutritional benefits. By adding DHA to confectionery, manufacturers aim to support brain, eye, and cognitive development, especially in children, while offering an enjoyable alternative to traditional supplements like capsules or oils. In 2024, global Candy DHA production reached approximately 2184 MT, with an average global market price of around US\$ 76 per KG. The Candy DHA market is gaining momentum as consumer demand for functional foods and nutraceuticals continues to rise. Gummies, chews, and other candy formats fortified with DHA are particularly popular among parents seeking convenient and enjoyable ways to support children's brain and eye development. These products also appeal to adults who prefer tasty, easy-to-consume alternatives to capsules or oils, aligning with the broader trend toward lifestyle-friendly supplements. The market is further boosted by innovations in algae-based DHA, which cater to vegetarian, vegan, and sustainability-conscious consumers. Growth in this segment is supported by rising health awareness, increasing disposable incomes, and the expansion of direct-to-consumer channels and online sales platforms. Companies are focusing on clean-label formulations, better flavor masking, and microencapsulation techniques to improve product stability and taste. Challenges remain in the form of higher production costs for plant-based DHA and regulatory scrutiny around health claims, but overall the market outlook remains positive as fortified confectionery bridges the gap between indulgence and nutrition.

The global Candy DHA market size was estimated at USD 166.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
