Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cannabigerol competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cannabigerol, or CBG, is a non-psychoactive cannabinoid that is one of the many chemical compounds found within the cannabis plant. It's often referred to as the "stem cell" or "mother" of all cannabinoids because it serves as the precursor for the development of other major cannabinoids, including tetrahydrocannabinol (THC) and cannabidiol (CBD). CBG is produced in the early stages of the cannabis plant's growth, and as the plant matures, it undergoes enzymatic changes that convert CBG into other cannabinoids, making it a relatively rare compound in mature cannabis plants. The global CBG market is expanding explosively, with the core driving force coming from the surge in demand for non-psychoactive cannabinoids in the medical and health consumption sectors. On the application side, the medical sector (anti-inflammatory, neurodegenerative disease treatment clinical research breakthroughs) accounts for the majority of revenue (55%), while skin care products (antioxidant, anti-acne effects) and functional foods (relieving anxiety, pain) have become the fastest growing segments; on the technical side, microbial fermentation methods are accelerating the replacement of traditional planting extraction with zero THC compliance and cost advantages. Regional markets are showing differentiation: North America (especially the United States) accounts for 60% of the global share based on mature regulations, followed by Europe to accelerate the process of medical legalization, while the Asia-Pacific region is limited by policies (China only allows exports) and growth lags, but emerging countries such as Thailand and Malaysia are gradually opening up medical imports to release incremental space. Future competition will focus on large-scale production of high-purity CBG crystals (>99%) and patented delivery technologies (such as nanoemulsification to improve

bioavailability), but regulatory lags (such as FDA not approving CBG as a dietary supplement) and supply chain fluctuations remain key risk points.

The global Cannabigerol market size was estimated at USD 157.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
