## Abstracts

CBN distillate refers to a concentrated form of the main component of cannabinoids extracted through distillation technology, which usually retains some other components of the cannabis plant, such as terpenes and other cannabinoids. It can be used in a variety of applications, including medical, health care and consumer products. CBN can be understood as a weaker version of THC. When THC components found in the cannabis plant age, they break down. This leads to the formation of a less potent cannabinoid called CBN. It's about 25% as effective as THC, which makes it a mild chemical.
