Abstracts

Canned preserved foods refer to a category of shelf-stable food products that have undergone thermal processing and hermetically sealed packaging, primarily in metal cans, glass jars, or retort pouches, to extend their shelf life by inhibiting microbial growth and enzymatic activity. This category encompasses a wide range of items, including fruits, vegetables, meats, seafood, soups, sauces, and ready-to-eat meals, all processed to maintain safety, nutritional value, and sensory qualities over extended periods without the need for refrigeration. The preservation method relies on principles such as heat sterilization, vacuum sealing, and sometimes the addition of approved preservatives or acidity regulators to ensure product stability.
