Abstracts

The cantilever single twisting machine is a core equipment dedicated to the twisting process of cables, optical cables, wire ropes and other wires. Its design features a single-side cantilever support structure with a winch or twisting cage installed at the end of the cantilever. Through the rotation and traction system, multiple single wires are twisted into a composite wire according to a specific pitch and direction. The equipment has high-precision twisting control, modular reel change design and automatic tension adjustment functions. It is suitable for the efficient production of small and medium-sized cables, especially in the field of flexible cables and precision stranded wires. Key technologies include servo synchronous drive, anti-kink guide system and intelligent preforming device, which can reduce stress concentration and improve twisting uniformity.

The global Cantilever Single Twisting Machine market size was estimated at USD 427.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
