## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Capacitive Electronic Water Descaler Systems competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Capacitive electronic water descalers are non-chemical, salt-free devices that prevent scale buildup by altering the physical properties of hardness minerals (calcium and magnesium) using high-frequency electric fields.
