Abstracts

The capacitive pen is a pen made of a conductive material and has a conductive characteristic for use in a touch-sensitive capacitive screen to perform a man-machine dialogue operation. A capacitive pen is an auxiliary device that uses a conductor material to mimic the human body (usually a finger) to complete human-machine dialogue. The consumer electronics industry is continuously evolving and innovating as new technologies are developed. Some of these developments include the internet of things 5G connectivity artificial intelligence and parallel worlds. These innovations will all shape the industry and contribute to changing consumer behaviour and demands. With each successive year the segment of the population that purchases consumer electronics is also set to increase. While older populations have been a notoriously challenging demographic for the consumer electronics industry this will look very different when digital natives who are accustomed to high digital connectivity become the older demographic. Therefore, brands should consistently be keeping on top of trends and adapt to the changing consumer behaviour and demands.
