## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Capacitor Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Capacitor films refer to a class of high-performance polymer-based dielectric materials specifically engineered for use in film capacitors. These films are typically made from polymers such as BOPP (biaxially oriented polypropylene), PET (polyethylene terephthalate), PEN (polyethylene naphthalate), or PI (polyimide), and are manufactured through precision extrusion and stretching processes to achieve ultra-thin, uniform thickness with superior dielectric properties. Depending on the end-use application, these films may be further metallized (e.g., aluminum or zinc vapor deposition) to enhance conductivity and enable self-healing properties. Capacitor films function as the core dielectric medium in film capacitors, enabling them to store and discharge electrical energy with high frequency response, low energy loss (dissipation factor), and strong mechanical stability. The global film capacitor market is showing a strong growth trend, and its development mainly benefits from the rapid expansion of the new energy vehicle industry and the continuous expansion of renewable energy power generation. In the field of new energy vehicles, China, as the world's largest new energy vehicle market, is continuously pushing up the demand for high-performance film capacitors through the accelerated layout of charging infrastructure and the technological upgrade of electric drive systems. At the same time, in the field of new energy power generation, with the in-depth promotion of China's "dual carbon" goals, the large-scale grid connection of clean energy such as solar energy and wind energy and the supporting construction of energy storage systems have significantly increased the demand for power electronic conversion equipment, thereby driving the vigorous development of the film capacitor market.

The global Capacitor Films market size was estimated at USD 1662.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
