Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Caprylic Acid Supplements competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Caprylic acid supplements reached approximately 148 million units, with an average global market price of around USD 8 per unit. Caprylic acid supplements are dietary products containing caprylic acid, a medium-chain fatty acid (MCFA) naturally found in coconut oil, palm kernel oil, and dairy products, known for its antimicrobial, anti-inflammatory, and energy-boosting properties. These supplements are commonly used to support digestive health by combating harmful bacteria, yeast (such as Candida), and fungi in the gut, while also promoting healthy gut flora balance. Additionally, because MCFAs are quickly metabolized into energy rather than stored as fat, caprylic acid supplements are popular among individuals seeking improved energy levels, weight management support, and enhanced cognitive function, making them a niche but growing part of the nutritional supplement market.

The global Caprylic Acid Supplements market size was estimated at USD 1183.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
