Abstracts

Capryloyl salicylic acid is a lipophilic derivative of salicylic acid formed by esterifying salicylic acid with caprylic acid, combining the exfoliating and anti-inflammatory benefits of beta-hydroxy acid (BHA) with the emollient and penetration-enhancing properties of a medium-chain fatty acid. This chemical modification enhances its stability and lipid solubility, making it particularly effective in targeting clogged pores and excess sebum in oily or acne-prone skin, while also reducing potential irritation compared to traditional salicylic acid. It functions as a gentle yet efficient keratolytic agent, promoting cellular turnover, unclogging follicles, and improving skin texture without excessive dryness, which positions it as a favored ingredient in formulations targeting sensitive skin, acne treatments, and refined exfoliating products.

The global Capryloyl Salicylic Acid market size was estimated at USD 18.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
