### Report Overview:

Capsule endoscopy is a non-invasive technique that allows the complete examination of the gastrointestinal tract using a wireless, disposable device known as a video capsule, which is equipped with a camera, battery, transmitter and a light source. Video capsules capture images in the esophagus, stomach and small intestine, which are utilized for the diagnosis of gastrointestinal diseases. The integrated camera in the capsule takes around two pictures every second and the battery of the capsule lasts for around 8 hours. Capsule endoscopy system includes a work station, data recorder, sensor and software, which are used in integration with wireless capsules. Data recorder is a device, which needs to be worn around the patient's waist so that the data captured by video capsule can be transmitted through sensors. Data recorders can also locate the position and movement of the capsule inside the stomach.
