Abstracts

A capsule filter cartridge is a disposable filtration unit designed for the removal of contaminants from liquids or gases, typically encased in a rigid plastic or polymeric housing that integrates both the filter media and structural support into a single, sealed, and ready-to-use assembly. These cartridges are engineered for applications requiring sterility, consistency, and ease of use, with common filter media including polyethersulfone (PES), polyvinylidene fluoride (PVDF), nylon, or activated carbon, depending on the target particles or molecules such as microorganisms, particulates, endotoxins, or chemicals. They are widely utilized in industries like pharmaceuticals, biotechnology, food and beverage, and laboratory settings, where they serve critical roles in processes like sterilization, clarification, and purification, often in systems where cross-contamination must be avoided and operational efficiency is prioritized.
