Abstracts

Captive renewable energy refers to the generation of renewable power?such as solar, wind, biomass, or small hydropower?by a company or entity primarily for its own consumption rather than for sale to the grid or third parties. This approach allows businesses to reduce their reliance on conventional grid electricity, mitigate exposure to volatile energy prices, lower operational costs over time, and achieve sustainability targets by decreasing their carbon footprint. Often implemented through on-site installations like rooftop solar panels or nearby dedicated renewable projects, captive renewable energy systems may also incorporate energy storage solutions to ensure a stable and reliable power supply, aligning energy production directly with the consumer?s demand patterns and operational requirements.

The global Captive Renewable Energy market size was estimated at USD 627.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.85% during the forecast period.
