Report Overview

The ambient light control chip is an integrated circuit used to control the color, brightness and dynamic effect of RGB LEDs. Constant current drive can ensure that the brightness of LEDs will not be affected by fluctuations in power supply voltage. It is suitable for occasions that require high color and brightness, such as indoor ambient lights. The switch drive controls the brightness by adjusting the duty cycle of the LED through PWM, which is suitable for occasions with low requirements on color and brightness, such as the indicator light outside the car.

The global Car Atmosphere Light Control Chip market size was estimated at USD 68.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
