Abstracts

A car Bluetooth FM transmitter is a compact electronic device designed to enable wireless audio streaming in vehicles lacking built-in Bluetooth connectivity by bridging the gap between a user's smartphone or other Bluetooth-enabled audio source and the car's FM radio system; it functions by pairing with the source device via Bluetooth, converting the digital audio signal into an analog FM radio transmission, and broadcasting it on an unused FM frequency that the car radio can then tune into, effectively turning any standard car stereo into a wireless audio receiver capable of handling phone calls, music, and navigation prompts without requiring permanent installation or hardware modifications.

The global Car Bluetooth Fm Transmitter market size was estimated at USD 980.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
