## Abstracts

Car Damage Detection is the process of identifying, analyzing, and assessing damage to a vehicle's exterior and structural components through manual inspection or through the use of technologies such as image recognition, artificial intelligence, and sensors. Its primary purpose is to determine the location, type (e.g., scratches, dents, cracks), and severity of damage to a vehicle following an accident, collision, or natural disaster. This provides a basis for insurance claims, repair assessments, and used vehicle appraisals. Vehicle damage detection is rapidly evolving from traditional manual assessment to intelligent, automated, and digitalized approaches. Currently, AI image recognition technology, combined with deep learning algorithms and big data training models, has enabled the automatic identification and classification of vehicle damage, including scratches, dents, and breakages. This technology is widely used in insurance claims, used car appraisals, and repair services.

The global Car Damage Detection market size was estimated at USD 3056.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
