Abstracts

A car driver assistance system (ADAS) is an integrated suite of electronic technologies designed to assist drivers in the driving process, enhance vehicle safety, and reduce the likelihood of human error. These systems leverage a combination of sensors?such as cameras, radar, lidar, and ultrasonic detectors?along with advanced algorithms and software to monitor the vehicle?s surroundings, interpret data in real time, and either provide warnings or intervene autonomously to prevent or mitigate collisions. Core functionalities include adaptive cruise control, lane departure warning and correction, automatic emergency braking, blind-spot detection, traffic sign recognition, and parking assistance. ADAS represents a critical intermediate step between traditional manual driving and fully autonomous vehicles, focusing on improving driver awareness, convenience, and overall road safety while laying the groundwork for higher levels of vehicle automation.

The global Car Driver Assistance System market size was estimated at USD 32145.67 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
