Report Overview

Automotive exhaust gas purifiers are designed to capture soot particles in the exhaust stream of diesel vehicles and convert them into carbon dioxide during the regeneration phase. This helps keep the air clean. The design of high-efficiency particulate filters depends on many factors. In addition to the regeneration strategy, the aim is to ensure the continuous burn-off of soot. Here consideration must be given to the operating conditions, different driving cycles and the individual engine exhaust concept of the vehicle manufacturer. Other factors relevant to ensuring long-term compliance with the statutory regulations for filtration efficiency are the filter area available and the resulting filter volume. Filters are often also used in enclosed areas. For these special automotive applications, the share of carcinogenic particles must be reduced by at least 90 percent.

This report offers a comprehensive and in-depth analysis of the global Car Exhaust Purifier market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
