Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Car Light Strips competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Car light strips refer to flexible or rigid lighting assemblies composed of LED, fiber optic, or EL (electroluminescent) technologies, designed for aesthetic, ambient, or signaling illumination within vehicles. These strips are commonly used in both exterior (e.g., DRLs, grille lights, underglow kits) and interior (e.g., dashboard ambient lights, footwell lights, door trims) applications. With the increasing integration of vehicle personalization, smart lighting systems, and ambient mood lighting in automotive design—especially in electric and premium vehicles—light strips have become critical in both functional signaling and emotional design language. Advanced versions integrate RGB color control, dynamic lighting effects, and synchronization with infotainment or driver-assist systems.

The global Car Light Strips market size was estimated at USD 2956.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
