Abstracts

CAR-M Cell Therapy is an immunotherapy based on chimeric antigen receptor (CAR)-modified macrophages. Macrophages are important cells in the immune system that have the ability to phagocytose and kill pathogens and tumor cells. In CAR-M Cell Therapy, specific CAR structures are introduced into macrophages through gene engineering techniques to enable them to specifically recognize and bind to tumor-associated antigens. These modified macrophages can more effectively recognize and attack tumor cells, thereby achieving tumor treatment. CAR-M Cell Therapy brings new breakthroughs in the field of tumor immunotherapy and provides more precise and effective treatment options for cancer patients.

The global CAR-M Cell Therapy market size was estimated at USD 431.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
