Abstracts

Sound insulation cotton is mainly used to absorb medium and high frequency noise. It is generally used in places with cavities, such as door panels and various interior panels. The types of sound-absorbing cotton can be roughly divided into three categories: Baisha cotton, high-density cotton and memory cotton. The relative cost of Baisha cotton is relatively low, and it is also the longest choice for the original car. The high-density sound-absorbing cotton has a relatively high cost and is mainly used in some parts that need to bear a certain pressure, such as the chassis. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, reaching 97.3 million vehicles and 95.89 million vehicles respectively. In 2018, the global economic expansion period ended, and the global automobile market as a whole declined. By 2022, there will be 81.6 million cars worldwide. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia accounts for 56% of the world's automobile production, Europe accounts for 20%, and North America accounts for 16%. The world's major automobile producing countries include China, the United States, Japan, South Korea, Germany, India and Mexico. Among them, China is the world's largest automobile producer, accounting for about 32%.

The global Car Modification Sound Insulation Cotton market size was estimated at USD 1051.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
