## Abstracts

CAR-NK cell therapy is an advanced cellular therapy technique that combines the natural anticancer ability of natural killer (NK) cells with the specific targeting function of chimeric antigen receptors (CARs). Through genetic engineering, CAR structures capable of recognizing specific tumor antigens are introduced into NK cells, thereby enhancing their targeting ability and killing power. This therapy has shown great potential in treating various types of cancers, including hematological tumors and solid tumors. CAR-NK cell therapy has lower toxic and side effects and better safety, making it a promising supplement or alternative to CAR-T cell therapy.

The global CAR-NK Cell Therapy market size was estimated at USD 2361.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
