Abstracts

The Car OS, which is the ultimate form of future in-vehicle operating systems, is the core for the intelligent development of future vehicles. It is responsible for vehicle control, cockpit management, and intelligent driving simultaneously, enabling cars to transform into intelligent transportation tools that offer a variety of functions, rather than simply being means of transportation. As more advanced features are introduced into vehicles, changes are taking place in the vehicle's electrical/electronic (E/E) infrastructures. New requirements in areas such as electrification, personalization, connectivity, automated driving, and assistance have led to a growing number of functions to be performed through software. There are several ways to develop the Car OS, including full-stack self-development by automakers, collaborative development between original equipment manufacturers (OEMs) and Tier 1 suppliers, and direct external procurement. However, collaborative R&D of the Car OS is considered the most advantageous and cost-effective option, as it allows for the full utilization of the strengths of all parties, resource sharing, and collaborative innovation, thereby accelerating the development process of intelligent vehicles.

The global Car OS market size was estimated at USD 529.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
