In 2024, global Car Seatbelt Webbing production reached approximately 35,048 tons, with an average global market price of around US\$ 25 per Kg. Car seatbelt webbing is a specialized woven fabric strap designed as the primary load-bearing component of automotive restraint systems, playing a critical role in occupant safety during vehicle operation and collisions. Typically manufactured from high-tenacity polyester yarns, the webbing is engineered to exhibit exceptional tensile strength, low elongation under load, resistance to abrasion, and long-term durability under diverse environmental conditions such as heat, humidity, ultraviolet exposure, and chemical contact. Its design ensures that in the event of sudden deceleration or impact, crash forces are effectively distributed across the occupant's torso and pelvis, reducing the risk of serious injury by preventing excessive forward motion. Beyond functional safety, modern car seatbelt webbing is also designed with attention to comfort, aesthetics, and integration with retractors, pretensioners, and load limiters, making it a critical element of both safety engineering and vehicle interior design.
