Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Car Sensorless Bluetooth Key competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Car Sensorless Bluetooth Key will reach 19.46 million units, with an average selling price of US\$44 per unit. The first generation of digital keys is based on NFC near-field communication technology, while the second generation utilizes Bluetooth Low Energy (BLE) technology. The third generation combines UWB, BLE, and NFC wireless communication technologies. Compared to physical keys and first-generation NFC digital keys, in-vehicle contactless Bluetooth keys are typically used within a 15-meter range in open areas. They offer low power consumption and mature technology, but performance can vary depending on factors such as the phone used and environmental interference. Car owners simply add their phone number to the digital key management interface, download the app, create a key, and use it. The industry's gross profit margin is around 20%.

Trends

- 1. Technology Convergence** BLE will merge with NFC and UWB technologies to form multimodal key solutions (such as BLE+NFC+UWB), enhancing security and compatibility. Driven by the performance improvements and cost reductions of these converged solutions, BLE+NFC offers significant cost-effectiveness and will become the mainstream in the market.
- 2. The Rise of BLE 6.0** Bluetooth technology is constantly evolving. The newly released Bluetooth 6.0 will introduce Channel Sounding (CS) technology, enabling centimeter-level positioning capabilities, which will enhance its competitiveness in digital key applications. Yuanfeng Technology's BLE 6.0 Channel Sounding digital key has been awarded a project and is expected to enter mass production in the first half of 2026.
- 3. Mainstream Market** Volkswagen models primarily use single-mode BLE, but its installed share has been declining year by year. BLE+NFC

solutions are gradually gaining popularity in mid-range models, becoming the mainstream. The BLE+NFC+UWB converged solution is being adopted in vehicles, with high-end models being the first to adopt it, enabling features such as liveness detection, kick-to-open, and personalized settings. The digital key installation rate of Chinese passenger cars will exceed 80%, and the integrated solutions of BLE+NFC and BLE+NFC+UWB will become the mainstream of the market.

The global Car Sensorless Bluetooth Key market size was estimated at USD 726.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.10% during the forecast period.
