Abstracts

A car shuttle train service, also known as an auto train or motorail service, is a specialized rail transport system designed to carry passengers along with their personal vehicles—typically automobiles, motorcycles, or small recreational vehicles—over medium to long distances. This service integrates passenger coaches with specially designed freight wagons or autoracks, offering a seamless, door-to-door travel alternative that eliminates the need for lengthy driving while still allowing travelers to have their own vehicle at the destination. It is particularly advantageous for routes that involve challenging terrain, congested highways, or geographic barriers such as mountain ranges or bodies of water, providing an efficient, eco-friendly, and stress-reducing option compared to conventional road travel. By combining the comfort and speed of rail with the flexibility and convenience of personal mobility, car shuttle services cater to tourists, relocating families, and seasonal migrants seeking a balanced solution between cost, time, and convenience.

The global Car Shuttle Train Service market size was estimated at USD 315.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
