Abstracts

Automotive loudspeakers, commonly referred to as car speakers, are integral components of a vehicle's audio system, responsible for reproducing sound from audio sources such as radios, CD players, smartphones, and navigation systems. Car speakers convert electrical signals into sound waves, delivering audio content to vehicle occupants. They are essential for providing entertainment, communication, and navigation guidance within the vehicle. As the industrial upgrading and consumption upgrading, car buyers' consumption experience of cars is no longer limited to the basic functions of the car. The experience of car entertainment functions has become an important factor affecting car buyers' consumption trends. As an important component inside the car to enhance the driving experience, the acoustic system is showing a trend of high-end development. High-power, multi-channel, and integrated digital signal processing power amplifiers are gradually being used in the automotive field. The number of in-car speaker configurations continues to increase with high fidelity. Car speakers will gradually become mainstream. In addition, consumption upgrading has led to continuous changes in the consumption structure of the automobile industry, and the sales proportion of mid-to-high-end and luxury models has shown an increasing trend. Mid- to high-end and luxury models have higher requirements for acoustic systems in terms of on-board amplifier configuration, number of speakers, and product performance indicators. The growth in sales of mid-to-high-end and luxury models has driven increased demand for acoustic products such as high-quality car speakers and car amplifiers. National policy support and the downstream automobile industry drive growth. The electroacoustic industry belongs to the electronic information manufacturing industry and is encouraged by national policies related to manufacturing upgrading. The company's products are oriented to the vehicle supporting market, and the development of the automotive acoustic products industry is directly and closely related to the automotive industry. As one of the pillar industries of the national economy, the

automobile industry plays an important role in promoting the development of the national economy. Governments of various countries have always attached great importance to the development of the automobile industry and provided numerous policy supports for its development. The current growth of the global automobile market mainly comes from two aspects. On the one hand, the economic development of emerging markets such as Brazil and India brings demand for first-time car purchases. On the other hand, it comes from the demand for repurchase of cars in some relatively mature automobile markets. This demand leads to the stable growth of the existing market. Compared with first-time buyers, re-purchasers pay more attention to the brand, quality, comfort and other factors of the car based on the driving experience of the purchased vehicle. The further development of the emerging automobile market and the increase in demand for repurchase cars driven by the transformation and upgrading of the consumption structure will drive the growth of its supporting industries.

The global Car Speakers market size was estimated at USD 5324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
