## Abstracts

The market for car start stop batteries, also known as enhanced flooded batteries (EFB) or absorbent glass mat (AGM) batteries, serves vehicles equipped with start stop technology that automatically shuts off the engine when idle to reduce fuel consumption and emissions. These batteries differ from traditional lead acid batteries by offering higher cyclic durability, faster recharge capabilities, and greater resistance to partial state of charge conditions, as they must frequently restart the engine and support continuous electrical loads during engine-off phases. Demand is driven primarily by stringent global emission regulations, rising adoption of fuel efficient vehicles, and growth in automotive production, particularly in Europe and Asia Pacific where start stop systems are widely implemented. Key market players focus on technological advancements to improve battery life and performance under varying climatic conditions, while competition centers on cost efficiency, reliability, and compatibility with evolving automotive electrical systems.

The global Car Start Stop Battery market size was estimated at USD 10825.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
