Abstracts

Car T cell therapy represents an advanced form of immunotherapy in which a patient's own T cells are genetically engineered to express chimeric antigen receptors (CARs) that enable them to recognize and eliminate specific cancer cells, primarily used in the treatment of certain hematologic malignancies such as acute lymphoblastic leukemia and non-Hodgkin lymphoma. This personalized therapeutic approach involves extracting T cells from the patient, modifying them ex vivo to enhance their tumor-targeting capabilities, expanding them in culture, and reinfusing them back into the patient, where they proliferate and mount a potent, targeted immune response against cancer cells bearing the designated antigen.

The global Car T Cell Therapy Solution market size was estimated at USD 7350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 24.50% during the forecast period.
