Abstracts

Laminated glass for automobiles has one more layer of laminated layer than ordinary tempered glass. Most of them are PVB or EVA. It is mainly a glass obtained by heating ordinary flat glass or float glass to a temperature close to the softening point, then rapidly cooling or chemically treating it. It has the characteristics of impact resistance, low temperature rapid change resistance, thermal stability and high mechanical strength. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, reaching 97.3 million vehicles and 95.89 million vehicles respectively. In 2018, the global economic expansion period ended, and the global automobile market as a whole declined. By 2022, there will be 81.6 million cars worldwide. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia accounts for 56% of the world's automobile production, Europe accounts for 20%, and North America accounts for 16%. The world's major automobile producing countries include China, the United States, Japan, South Korea, Germany, India and Mexico. Among them, China is the world's largest automobile producer, accounting for about 32%.
