Abstracts

Carbohydrate energy gels are concentrated energy supplements designed for high-intensity and endurance sports, usually provided in small packages for easy carrying and quick consumption. Its main ingredients are high concentrations of simple carbohydrates (such as glucose, fructose or maltodextrin), which can be quickly absorbed by the body to provide immediate energy for muscle activity. Many energy gels also add electrolytes (such as sodium and potassium) to replenish minerals lost during exercise and help maintain fluid balance; some products may contain caffeine or amino acids to enhance physical fitness and reduce fatigue. This product is often used in marathons, cycling, mountaineering and other sports that require long-term physical strength. It can quickly replenish energy without increasing the burden of digestion.
