Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carbon Capture Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Carbon Capture Materials are materials designed to selectively capture and store carbon dioxide (CO₂) from industrial emissions, power plants, or ambient air. They play a crucial role in reducing greenhouse gas emissions and supporting carbon neutrality goals. In 2024, global Carbon Capture Materials production reached approximately 10.9 k tons, with an average global market price of around US\$ 29.5 k USD per ton. The production capacity for Carbon Capture Materials in 2024 was approximately 12 k tons. The typical gross profit margin for Carbon Capture Materials is between 25% and 35%. The Carbon Capture Materials industry chain consists of upstream raw material suppliers, midstream material manufacturers, and downstream carbon capture technology providers and end users. Upstream includes suppliers of chemical precursors, polymers, activated carbons, metal oxides, and porous support materials. Midstream companies develop and produce carbon capture materials such as amine-based sorbents, metal-organic frameworks (MOFs), zeolites, and advanced adsorbents designed for post-combustion, pre-combustion, and direct air capture applications. Downstream, these materials are integrated into carbon capture systems used in power plants, cement and steel industries, chemical plants, and emerging direct air capture facilities. The industry is driven by increasing regulatory pressure on CO₂ emissions, technological innovation in adsorption and absorption processes, and growing demand for sustainable industrial practices.

The global Carbon Capture Materials market size was estimated at USD 323.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10%

during the forecast period.
