Abstracts

Carbon capture and sequestration/storage (CCS) is the process of capturing carbon dioxide (CO₂) formed during power generation and industrial processes and storing it so that it is not emitted into the atmosphere. CCS technologies have significant potential to reduce CO₂ emissions in energy systems. Facilities with CCS can capture almost all of the CO₂ they produce (some currently capture 90 or even 100 percent). Integration and optimization are critical for maximizing the effectiveness and long-term financial viability of Carbon Capture, Utilization, and Storage (CCUS) systems. While optimization seeks to improve effectiveness and decrease costs, successful integration of various CCUS technologies and processes results in a cohesive system.

The global Carbon Capture Storage (CCS) Technology Integration market size was estimated at USD 547.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.40% during the forecast period.
