Abstracts

Carbon-carbon composites are high-performance composite materials consisting of carbon fibers and a carbon matrix. They exhibit excellent mechanical strength and thermal stability at high temperatures, and have high heat resistance and thermal shock resistance, so they are widely used in the aerospace field. This material is often used to manufacture brake discs for aerospace vehicles, missile nose cones, rocket nozzles, and other structural parts that need to withstand extreme temperatures. Carbon/carbon composites are formed by weaving or laying carbon fibers together, and then carbonizing them at high temperatures to obtain high-strength, lightweight composites.

The global Carbon-carbon Composites for Aerospace market size was estimated at USD 1402.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
