Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carbon Coated Binder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of carbon-coated binders will reach 39,000 tons, with an average selling price of US\$20,000 per ton. Carbon-coated binders are functional adhesives used on material surfaces or during electrode preparation. Their main components typically include carbon-based materials (such as graphite, carbon black, and conductive carbon fiber) and polymer binders (such as polyvinylidene fluoride (PVDF) and polyacrylonitrile (PAN)). They are used to firmly bond active material particles, conductive agents, and substrates, while providing excellent conductivity and structural stability. They are widely used in the manufacture of lithium-ion batteries, electrode materials, supercapacitors, and other energy storage devices to enhance the mechanical strength, electrochemical performance, and cycle life of electrodes.

The global Carbon Coated Binder market size was estimated at USD 780.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
