Abstracts

Carbon composite bolts and nuts are fastening components made from carbon composite materials. Carbon composites are typically composed of carbon fibers as the reinforcing agent, combined with a resin matrix (such as epoxy resin, phenolic resin, etc.) through specific processes. Carbon fibers possess excellent properties such as high strength, high modulus, and low density, while the resin matrix serves to bond the carbon fibers, transfer loads, and give shape to the composite. The shapes of the bolts and nuts are similar to traditional metal bolts and nuts, and they achieve connection and fastening functions through threaded engagement, which can be used to connect two or more components.

The global Carbon Composite Bolts and Nuts market size was estimated at USD 577.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
