Report Overview

In addition to the expensive production process, carbon fibre has a further drawback – it is difficult to recycle. This is because in the production process of carbon fibre, long acrylic fibres are bonded to a polymer, which strongly resembles glue. That takes high temperatures, of up to hundreds of degrees Celsius, and powerful forces. This means the polymers are not at all easy to separate during the recycling process. It can be done, but requires a chemical or mechanical process. Another option is to burn off the polymers.
