Report Overview:

Carbon fiber is a lightweight, high-strength material that is commonly used in industries such as aerospace, automotive, and sporting goods. However, the production of carbon fiber involves significant energy and resource consumption, and the disposal of carbon fiber waste can also pose environmental challenges. Therefore, recycling and reuse of carbon fiber can help reduce the environmental impact of its production and waste. Carbon fiber recycling involves the process of breaking down and separating carbon fiber components from the waste material, which can be either in the form of finished products or manufacturing scrap. The recycled carbon fiber can be used in a variety of applications, such as reinforcing plastics, composites, and concrete.

The Global Carbon Fiber Recycling and Reuse Market Size was estimated at USD 138.06 million in 2023 and is projected to reach USD 282.89 million by 2029, exhibiting a CAGR of 12.70% during the forecast period.
