Abstracts

Carbon fiber reinforced polymer or carbon fiber reinforced plastic, is an extremely strong and light fiber-reinforced plastic which contains carbon fibers. Carbon Fiber Reinforced Polypropylene is one of CFRPs. CFRPs can be expensive to produce, but are commonly used wherever high strength-to-weight ratio and stiffness (rigidity) are required, such as aerospace, superstructures of ships, automotive, civil engineering, sports equipment, and an increasing number of consumer and technical applications. Composites include fiber-reinforced materials and organic matrices, with the most commonly used materials being Glass Fiber Reinforced Polymer (GFRP) and Carbon Fiber Reinforced Polymer (CFRP) composites, followed by composites reinforced with aramid or natural fibers. After a decline in production in 2020, the global composites industry is gradually returning to pre-pandemic growth rates, with the energy, electronics/electrical, construction, marine and consumer goods markets showing rapid recovery. New growth opportunities are also emerging in emerging sectors such as electric and hydrogen-fueled vehicles, marine, sports and recreation, medical, electrical and electronics, oil and gas, furniture and design, defense and security, and renewable energy. Between now and the future, composites will provide higher performance, lighter, more energy efficient as well as more durable products in a wider range of applications and markets.

The global Carbon Fiber Reinforced Polypropylene market size was estimated at USD 1048.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
