Report Overview

Carbon fiber thermal conductive gasket is a kind of thermal conductive gasket with thermal conductive carbon fiber as the main raw material. It is used between heating components and radiator. By filling the air between the two gaps, the heat of electronic equipment can be accelerated to export, thus ensuring the performance and life of electronic products. Thermal conductive carbon fiber is a type of high thermal conductive carbon fiber material with good mechanical properties and excellent thermal and radiation heat dissipation capabilities. The fibrous high thermal conductive carbon powder made from this carbon fiber itself is fibrous and can be designed with thermal conductivity orientation, which is the biggest difference and advantage from previous thermal conductive materials.
