## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carbon Fibre Reinforced Filler competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Carbon Fibre Reinforced Filler reached approximately 600,000 L, with an average market price of about USD 96 per L, an annual production capacity of roughly 700,000 L, and an industry-average gross margin of approximately 28%. Carbon Fibre Reinforced Filler is a high-performance repair or structural enhancement compound used in automotive body repair or lightweighting. It involves dispersing carbon fibres or carbon nanofibres into a resin matrix (such as epoxy, polyester, or polyurethane) to fill damaged areas, reinforce structure, and allow sanding and finishing for paint. Compared to conventional fillers, it offers higher strength, lower weight, and improved fatigue durability, making it favored in premium car repair, motorsport, and bespoke modification sectors. In the supply chain, upstream supplies include carbon fibre feedstock, resin monomers, curing agents, additives, coupling agents and modifiers; downstream comprises auto repair shops, OEM body repair centers, modification shops, and insurance repair networks. In cost structure, raw materials (fibre, resin, additives) typically account for 60-65%, labor and manufacturing overhead 10-15%, R&D and formulation optimization 5-10%, packaging/transport/administration 5-10%, and the residual portion is profit and taxes. As for downstream consumption, if each repaired car uses on average 0.5 units, the forecasted shipment corresponds to servicing about 500,000 vehicles annually.

The global Carbon Fibre Reinforced Filler market size was estimated at USD 57.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
