Report Overview:

Green ammonia is crucial to tackle the existential challenges of producing enough food to feed a growing global population and generating CO₂-free energy. Ammonia (NH₃), a compound of nitrogen and hydrogen, is mainly used to manufacture fertilizers. 80% of the annual global production of over 170 million metric tons is used in this way. And that should become even more in the next few years. But ammonia can also be burnt to make electricity with air and water the only emissions, or used as a storage medium for energy generated from renewable sources.

The Global Carbon-free Ammonia Market Size was estimated at USD 89.00 million in 2023 and is projected to reach USD 5610.86 million by 2029, exhibiting a CAGR of 99.50% during the forecast period.
