Abstracts

Carbon manganese steel is a low-alloy steel characterized by its composition of carbon and manganese, which enhances strength, hardness, and wear resistance while maintaining good ductility and weldability. It belongs to the family of high-strength, low-alloy (HSLA) steels and is widely used in applications requiring durability under mechanical stress, such as in construction, mining equipment, automotive components, and heavy machinery. The material's properties stem from the synergistic effect of carbon, which contributes to hardness, and manganese, which improves hardenability and tensile strength. Common grades include AISI/SAE 15xx series (e.g., 1524, 1541), with variations tailored to specific mechanical and processing requirements, making it a versatile choice for structural and industrial parts subjected to high loads or impact.

The global Carbon Manganese Steel market size was estimated at USD 7865.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
