## Abstracts

A Carbon Monoxide Sensor Portable Generator is a portable power generation device equipped with a carbon monoxide (CO) detection system that continuously monitors CO levels in the air during operation. If dangerous CO concentrations are detected, the sensor automatically triggers an alarm or shuts down the generator to prevent poisoning incidents. These generators are widely used in home backup power, outdoor camping, construction sites, and emergency rescue operations, particularly in environments with limited ventilation. In recent years, as safety regulations have become stricter, several countries and regions have mandated CO sensor integration in portable generators. For example, the U.S. Consumer Product Safety Commission (CPSC) has implemented regulations to enhance consumer protection. In the future, with advancements in smart sensor technology, these generators may incorporate remote monitoring, data analytics, and automatic adjustment features, further improving safety and user experience while promoting more efficient and eco-friendly energy solutions.

The global Carbon Monoxide Sensor Portable Generator market size was estimated at USD 890.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during the forecast period.
