Report Overview

Carbon nanotube bonded sheets, referring to their thermal conductivity of up to 100 W/mK, carbon nanotubes have high thermal conductivity and are promising candidates for heat dissipation from heat sources such as semiconductor devices. However, their fragile nature makes them impractical for many applications. To address this problem, a technique has been commercially developed to laminate vertically aligned carbon nanotubes while maintaining their original properties of high thermal conductivity and flexibility, as well as a technique to bond them with sufficient adhesive strength. This technology facilitates the cutting and handling of carbon nanotube sheets, allowing them to be used as heat dissipation materials, such as automotive power modules for electric vehicles(EVs).
